New Zealand Specialised Coatings Ltd

The perfect way to finish

Through experience New Zealand Specialised Coatings Ltd (NZSC) know the key questions to ask in determining the best possible floor coating solution to fit function and cost.

Before

After

It is hard to define exactly what makes a really great floor coating, but if there is one common thread across all the projects presented here, it is simply the passion poured into each and every project by very experienced and professional installers, the quality of product used, the outstanding finish to every floor surface and the glowing testimonials from very happy clients.

BUT WHAT IS SO SPECIAL ABOUT FLOOR COATINGS?

Besides the obvious level of toughness, durability and resilience it has a high resistance to impact and abrasion. For those who are in food preparation it is hygienic with easily cleaned surface finishes. Highly recommended for use in New Zealand and international food processing facilities, the SIKA NZ flooring products we use will meet the requirements of local council health regulations, MAF or other export requirement including GMP manufacturing processes.

WHAT SHOULD YOU CONSIDER WHEN PUTTING A NEW COATING ON YOUR FLOORS?

New Zealand Specialised Coatings Ltd can help you investigate carefully all the options for flooring in commercial/industrial environments particularly if you require high hygiene standards. Floors represent a large investment and any failure is not only costly but can be hugely disruptive to any manufacturing operation.

SO WHAT MAKES A GOOD FLOOR COATING?

Preparation combined with excellent workmanship. The New Zealand Specialised Coatings Ltd team prides itself on its quality workmanship and reputation. With our knowledge of the flooring systems available on the market today and the support we give, we are confident we can provide you with the best flooring system for your needs.

- Longevity
- Versatility
- Aesthetics
- Chemical Exposure
- Cleaning Methods
