

# World class egg processing facility gets world class floor protection

Before

After

**Zeagold Foods is New Zealand's leading producer of quality eggs and egg related products. Growing product demand in New Zealand and the Asia Pacific region meant an expansion of their manufacturing capability was necessary.**

At Zeagold Foods, their customers' requirements take top priority, and they strive to achieve flexibility in their operations to cater for individual needs.

Zeagold opted to expand into an existing, unused boutique dairy manufacturing facility in South Auckland, and

a substantial upgrade was commissioned. With over six million dollars spent on the upgrade, the result was a world class egg processing facility, which will meet the growing demand for their products and the very high quality required by their discerning customers.

Specialist flooring contractor, New Zealand Specialised Coatings and product supplier, Sika (NZ) Ltd were chosen to recommend, supply, and install a durable flooring system, which could withstand the stringent day-to-day operations at Zeagold.

Due to previous work undertaken on other Zeagold manufacturing sites, they knew that New Zealand Specialised Coatings and Sika (NZ) Ltd would provide a flooring solution to meet the very high quality and hygiene standards required. Zeagold was one of the first companies of its type in New Zealand to have an approved Risk Management Programme (RMP).

Upgrading the existing old floor meant that all damaged or unsatisfactory flooring had to be removed or repaired. New drains and 500mm high coves

were installed, and the new Sikafloor® coating was applied to approximately 600m<sup>2</sup> of floor area. In addition, because Sikafloor products can be tinted to almost any colour, this allowed Zeagold to use different coloured floors to define the various manufacturing locations within their facility.
