

Sika flooring for Jack Links refurbishment

Aluminium coving was removed and replaced using very smooth Sika floor coving

Floors were finished with a durable slip-resistant finish to ensure maximum safety for staff

The Sika floor installation was completed within a very tight timeframe

Jack Links' Beef Snacks can be found in most parts of the world including Europe, Japan, Singapore, Hong Kong, USA, Canada, Middle East, and Korea to name just a few.

Their New Zealand 3000 square metre purpose-built factory was opened in July 2002 to make high quality beef snacks using the latest high tech food processing equipment.

Jack Links says it all starts by carefully purchasing the best quality New Zealand beef. The beef is sliced, then seasoned and slowly smoked to produce a healthy, high protein and great tasting snack.

The same careful evaluation and selection went into the decision-making process when it came to upgrade their

floors in the processing areas of the Auckland plant.

Jack Links is an export licensed facility which is frequently audited by the New Zealand Food Safety Authority, Good Manufacturing Practice and discerning overseas customers.

Not only was the Sika floor able to meet the very demanding manufacturing conditions within the plant, it was also able to satisfy the very tight installation timeframe.

Sika approved contractor New Zealand

Specialised Coatings Ltd applied approximately 800 square metres of Sika flooring to processing areas in 2009.

All aluminium coving was removed and replaced using very smooth Sika floor coving.

It was important that the new coving be cavity free and fully seal with the insulated wall panel. Floors were finished with a durable slip resistant finish to ensure maximum safety for staff.

Due to the great performance of the flooring under very tough conditions a further 600 square metres of Sika floor was applied earlier this year.

'We were pleased with the perform-

ance and quality of workmanship and attention to detail provided by New Zealand Specialised Coatings Ltd. They were very responsive and pulled out all stops to get the flooring work completed to meet the critical time frame," says e. According to engineering manager Neil Baxter.

Sika takes the guess work out of getting it right.
