

Sika flooring in the slaughter and boning rooms was the perfect solution for Greenlea Premier Meats

Greenlea decided to upgrade its floors at its Morrinsville plant. Due to the nature of the industry the floors needed to be tough, durable and meet maximum resistance to impact and abrasion.

Privately owned and operated, Greenlea Premier Meats has evolved from humble beginnings into a large modern operation known for providing consistent quality and a high level of service.

Peter Egan, Greenlea's founder, has spent his lifetime working in the New Zealand meat industry, first in the wholesale, then in the retail side of the industry as a butcher in Gisborne, followed by the export processing business before taking a senior role in the administrative side of the industry.

It was this wealth of experience that led to the formation of Greenlea in the early 1990s – a company that has developed its own unique approach to presenting fine New Zealand meats to the rest of the world.

Today the Waikato-based company has an international reputation for the consistent quality of products and the high level of service provided through strong relationships with customers and suppliers.

Greenlea takes pride in being a family business, providing an environment

that rewards success and encourages excellence. It is the people that make the company so special and such success comes from creating a great team and giving encouragement for big things to happen.

Last year Greenlea decided to upgrade its floors in the slaughter and boning rooms at its Morrinsville plant. Due to the nature of the industry the floors needed to be tough, durable and meet maximum resistance to impact and abrasion.

The floors also needed to have precisely the right falls and coves to ensure maximum efficiency in the drainage of liquids, along with being impervious to chemicals and be totally hygienic – a legal requirement. Another important feature was a slip-resistant finish to ensure maximum safety for all staff.

Sika products were quickly installed by New Zealand Specialised Coatings to minimise downtime and get the plant back into production within agreed timeframes.

Greenlea was thoroughly satisfied with the quality of the Sika products used

The right falls and coves ensure maximum efficiency in the drainage of liquids

and the attention to detail shown by New Zealand Specialised Coating.

For all projects, large and small – Sika does take the guess work out of getting it right.

Sika® Industrial Floor Finishes protect your business, your assets & the environment

Uses:

- Warehouse
- Factories
- Wet & Dry Processing
- Packaging & Bottling
- Laboratories
- Clean Rooms
- Food Processing

Benefits:

- Hygienic
- Durable
- Slip-Resistant
- Easy Clean
- Chemical Resistant
- Non-Tainting
- In many colours
